MMS / EQUIPMENT BUYING GUIDE

Clinic essentials buying guide

Complete the examinations performed every day before adding equipment that creates a new service. Patient sizes and replacement supplies matter more than a large bundled kit.

START HERE

Start with a dependable acoustic stethoscope, purpose-built ear/eye optics, suitable BP cuffs, thermometer and patient-appropriate oximeter. Keep a working Cardiology III; compare HEINE mini 3000 or compatible Welch Allyn additions for optics.

CONSIDER ALTERNATIVES WHEN

Add digital sound, spirometry, dermoscopy or audiometry for a defined task with trained users and follow-up. Spirobank II Basic supports standalone work; Easy on-PC needs a maintained computer.

WATCH THE BUDGET

Budget tips, cuffs, probe covers, breathing interfaces and calibration. HBP-1320 is for age three and above; Nonin 9590 does not cover neonatal or prolonged unattended monitoring. CORE 500's three-lead ECG does not replace diagnostic 12-lead ECG.

CHECK THE SUPPORT

Match reusable instruments to an established processing route and inspect disposable-kit contents separately. Verify software entitlement and actual offline workflow for connected additions.

THREE QUESTIONS FOR THE SUPPLIER

1. Which patient sizes do the included cuffs, probes and tips cover?

2. Which compatible handles and supplies can we keep using?

3. What training, consumables and recordkeeping does the added service require?

Selected sources: Littmann / Solventum · HEINE · Baxter / Hillrom
