Shipping: map every handover

A freight quote can stop well before equipment reaches an accepted installation. Plan the whole route and assign every responsibility before dispatch.

START HERE

Build an origin-to-room worksheet naming the equipment engineer, packer, carrier, broker, receiving team and installer, with evidence and handover points for each.

PAY MORE WHEN

Specialist packing, handling or coordination resolves a material gap in the route, equipment requirements or the hospital's ability to manage contractors.

WATCH THE BUDGET

Include de-installation, packing, clearance, unloading, rigging, site work, storage, waiting, re-delivery, installation and any uncovered loss exposure.

CHECK THE SUPPORT

Confirm destination-specific requirements with qualified advisers. Inspect and document receipt, preserve claim evidence, and keep delivery separate from installation and technical acceptance.

THREE QUESTIONS FOR THE SUPPLIER

1. Where does your scope end, and who takes responsibility next?

2. Who confirms the destination and documents are ready before dispatch?

3. Who carries transport risk and manages any damage claim?
