Infusion and syringe pump buying guide

Choose a sustainable supply of approved tubing and syringes before choosing a pump family. A cheap console can create an expensive recurring dependency.

START HERE

Compare Infusomat/Perfusor compactplus where B. Braun consumables and service are dependable. Give Agilia VP MC WiFi/SP MC equal consideration where Fresenius replenishment and technical support are stronger.

PAY MORE WHEN

Fund drug libraries, profiles and networking when the hospital has people to approve, maintain and update them. Family standardization is useful when it reduces training and supply work; matching fronts alone does not justify replacement.

WATCH THE BUDGET

Compare the same annual approved-set basket, including delivered prices, minimum orders and expiry. Standard Infusomat compactplus does not accept arbitrary tubing; physical syringe fit does not establish validated operation.

CHECK THE SUPPORT

Require calibration/verification and battery support. For donated Spectrum or networked Alaris systems, identify exact serials or software versions and the applicable correction record.

THREE QUESTIONS FOR THE SUPPLIER

1. Which approved set codes and syringe brands/sizes are supplied locally?

2. What is their delivered annual cost at our expected use?

3. Who maintains the pump configuration, drug library and verification schedule?
