Eye-care equipment buying guide

Separate retinal imaging, slit-lamp examination and tonometry. Buy the missing task before paying for a newer camera or a more portable instrument.

START HERE

For a fixed slit-lamp station, compare SL-2G with an inspected BM 900. For seated/standing tonometry, evaluate IC100. For fixed retinal imaging, compare NW500 and DRSplus using representative, gradable images.

PAY MORE WHEN

IC200 adds supine and reclined positioning. Pictor Prestige can extend retinal capture to patients unable to use a fixed station. PSL Classic or SL-19 addresses bedside slit-lamp access.

WATCH THE BUDGET

Include slit-lamp table/head support, camera software and the actual tonometry supplies. TP01 probes are single-use and must not be cleaned for reuse. Pictor's anterior module does not automatically replace a slit lamp.

CHECK THE SUPPORT

Have intended operators demonstrate capture and export. Check used optics and mechanics, exact Kowa model code, compatible batteries and the repair route for the complete instrument.

THREE QUESTIONS FOR THE SUPPLIER

1. How many representative retinal images are gradable, including repeat attempts?

2. Which patient positions does this tonometer support?

3. Which probes, covers, table accessories and software rights are included?
