MMS / EQUIPMENT BUYING GUIDE

Surgical microscope buying guide

Choose the working view, focus controls and mounting arrangement the surgeon can use, then price the complete transport or fixed-theatre package.

START HERE

Evaluate Scan Optics SO-111T for table-mounted travel work when manual 5x/10x adjustment is acceptable. Its AC/12 V input supports a portable comparison; the battery and approved mounting still need specification.

PAY MORE WHEN

M220 F12 adds motorized focus and magnification for a fixed ophthalmic workflow. OM-6 is a compact outpatient alternative whose cataract suitability requires review of the actual environment and configuration.

WATCH THE BUDGET

Include objective, stand or clamp, foot control, assistant view, case and power. M220's upgradable XY function is not necessarily installed. SO-111T's differing published weight descriptions need a final packing list.

CHECK THE SUPPORT

Have the surgeon accept the complete optics and controls. Verify service for a donated head/stand combination. Surgilens remains an unresolved production offer, not a confirmed available purchase.

THREE QUESTIONS FOR THE SUPPLIER

1. Can the surgeon demonstrate the intended work with these controls?

2. What is the complete packed weight and specified battery endurance?

3. Which stand, XY, assistant-view and foot-control options are included?
