MMS / EQUIPMENT BUYING GUIDE

C-arm and X-ray buying guide

Choose the imaging job first: outreach radiography, repeated bedside imaging and surgical fluoroscopy need different equipment and support.

START HERE

Start with a complete MinXray Impact Wireless package for outreach. For full-size fluoroscopy, compare OEC One CFD with an inspected, supportable refurbished OEC 9800 or 9900.

PAY MORE WHEN

DRX-Revolution's powered movement can help frequent bedside work. Elite CFD earns consideration when its positioning or cooling addresses a real procedural limit. Demonstrate mini-C-arm anatomy coverage before choosing one.

WATCH THE BUDGET

Include the detector, acquisition computer, software, batteries, positioning equipment and commissioning. OEC One's standby function is for room changes; it does not establish off-grid X-ray operation.

CHECK THE SUPPORT

For a used C-arm, require tube, image-chain and motion-system assessment. A manufacturer parts category does not establish stock or repair coverage for the offered serial.

THREE QUESTIONS FOR THE SUPPLIER

1. Can this generator and detector cover our examination list?

2. Can the C-arm obtain every required view with our table?

3. What happens if commissioning fails or the detector needs replacement?
