MMS / EQUIPMENT BUYING GUIDE

CT and MRI buying guide

A first scanner is a new service: fund accepted examinations, staffing, installation and continuing repairs together before committing to the machine.

START HERE

For routine CT, compare Revolution Advance and SOMATOM go.Now against the actual examination list. For MRI, evaluate Free.Star where siting and helium logistics constrain the project, alongside the 1.5T MR 5300.

PAY MORE WHEN

Pay for additional protocols, coils or capacity when radiologists accept the results and the complete examination workflow demonstrates a useful gain. A larger slice number alone cannot settle the CT choice.

WATCH THE BUDGET

A donated scanner still needs relocation, room work, installation, software rights and service. CT reconstructed slice counts differ from acquired coverage; low-helium MRI still has substantial operating obligations.

CHECK THE SUPPORT

Name the organization that will repair the exact relocated system. Price major-component exposure and service continuity before treating a low equipment price as a saving.

THREE QUESTIONS FOR THE SUPPLIER

1. Which protocols and coils are included in acceptance?

2. What is the complete installed price and annual fixed cost?

3. Who covers the tube or magnet and recovery after power interruption?
